## PRODUCT INFORMATION

FOOTHILL BEEF MINERAL is a complete free-choice mineral-vitamin mix designed specifically for situations where a calcium to phosphorus ratio of 2 to 1 is needed for optimum performance.

FOOTHILL BEEF MINERAL contains calcium necessary for strong bone development, maximum milk production, and other body functions. Phosphorus, provided in FOOTHILL BEEF MINERAL, is necessary for optimum energy utilization, reproductive performance, and fiber digestion. FOOTHILL BEEF MINERAL also contains magnesium and a specially formulated blend of traced minerals including copper, zinc, manganese, selenium, cobalt, and iron. These minerals play vital roles in body metabolism and are necessary to build and maintain an active immune system, healthy tissues, and overall animal health. Several of these trace minerals play key roles in energy and protein metabolism and are essential to optimize efficiency and rate of gain. Vitamins A, D, and E, also included in FOOTHILL BEEF MINERAL, play key roles in the maintenance of optimum health, growth, and reproductive performance.

## FEEDING DIRECTIONS

Self-feed FOOTHILL BEEF MINERAL as the only source of supplemental minerals and salt to mature cattle (grazing medium to low roughages) in a covered feeder at the rate of 2 TO 3.6 ounces per head daily. Consumption may vary with quality of forage available. Provide a continuous supply of clean, fresh water. Monitor consumption by salt-starved or mineral-starved animals.

Average consumption should not exceed 3.6 oz per head per day so that the intake of selenium does not exceed the legal maximum of 3 mg per head per day.

Net Weight: **50 Pounds (22.7 Kilograms)**
