

MS LAMB MILK REPLACER

MS LAMB MILK REPLACER will provide all the nutrients necessary for optimal growth of lambs from its second day of life through weaning when fed as directed

FEATURES AND BENEFITS

- ☛ A 23% protein, 30% fat, milk replacer
- ☛ Contains emulsified fats and oils for optimum fat digestibility
- ☛ Contains all milk protein sources
- ☛ Highly palatable and economical to feed
- ☛ Acidified for use in Cold Ad-Libitum feeding systems. Acidification improves kid performance and reduces the incidence of scours.

FEEDING INSTRUCTIONS

1. Ensure that the baby lamb receives colostrum during its first 12 hours of life.
2. For best results, mix Lamb Milk Replacer with cold water and offer ad-libitum to lambs through a suitable nipple feeder. Milk should be available at all times. Milk will stay fresh up to 24 hours due to the addition of unique acids and preservatives.
3. For hand feeding with a nipple bottle or restricted feeding offer milk warm at 100°F. It is recommended to offer 3 to 6 feedings per day of warm milk during the first two weeks of life and thereafter 2 feedings per day. Never offer more than ½ pint per feeding.
4. Provide good quality lamb creep at 3 to 6 days of age and restrict hay intake to the amount a lamb will eat in an hour.
5. Wean lambs at a minimum of 30 days of age and weighing at least 25 lbs.
